CLOUD 9 DOGWOOD

Plant Patent No. 2112

The Ultimate Perfection In Dogwoods—Blooms Profusely From First Year—Graceful White Disc-Shaped Blossom.

The finest new Dogwood we have ever seen. Unlike the old type seedling variety which won't bloom until eight or ten years old, Cloud 9 will bloom when two or three years old, literally covering the whole tree with hundreds of flowers, resembling a white cloud. Instead of planting the common seedling, plant Cloud 9. You will have a better and hardier tree, with greater masses of blooms, the rest of your life. We offer 2-yr.-old trees, ready to bloom, 2 to 3 ft. tall. **\$3.95 each; 2 for \$7.50, postpaid**

Exclusive
VIGOR-TREATED PLANTS
A BIG STEP FORWARD-ROOT FED PLANTS

As you know, any plant suffers a shock and is set back when transplanted, especially when the soil is removed from the root system. Any plant has to re-establish itself and start growth over again. To help a plant survive and get under way again fast, Krider treats each plant before shipment with a special Krider formula known as PZ (Plant Zest).

2328 GOLD CUP. 1958 All-America Winner. Pointed buds of canary-yellow open into large, non-fading blooms. A needed addition to the yellow Floribundas. (Plant Pat. No. 1683.) 2-yr., No. 1 plants, \$2.00 each; 3 for \$5.25, postpaid.

"The Miracle Plant Food" RA-PID-GRO

USE RA-PID-GRO EVERY 2 OR 3 WEEKS throughout the season for the best results from both new and old plantings. Water thoroughly after fertilizing.

Ra-pid-gro is so easily prepared for use. Just add water at the rate of 1 pound of Ra-pid-gro to 22 gallons of water. Allow to dissolve and it's ready for use. Apply around the plants according to directions on the bag. For use on small numbers of plants, mix at the rate of a teaspoonful to a quart of water. Also very valuable for use when transplanting. Dip plants in solution for 3 or 4 minutes.

Stop Expensive Transplanting Losses

By using a large tub or pail and mixing Ra-pid-gro with water at the rate of 22 gallons of water to 1 pound, you have a solution in which to dip the roots of the plants before setting out. If this is done, you will practically eliminate transplanting losses. Trees, shrubs, roses, evergreens, and similar plants should be set in the solution 3 to 4 minutes. Berry plants 1 minute. Vegetable and house plants just dip and remove. Grass and vegetable seeds should be sprinkled with Ra-pid-gro before sowing. Use the solution for watering after setting out plants or sowing seed.
